Wet avalanches as day progresses

Wet, region B

Level 2, moderate

Wet avalanches as day progresses

In the late morning as a consequence of warming during the day and solar radiation there will be a rapid increase in the avalanche danger. From origins in starting zones where no previous releases have taken place full-depth and wet avalanches are to be expected, including quite large ones. The avalanche prone locations are to be found in all aspects. Backcountry tours should be started very early and concluded timely. Caution is to be exercised in areas with glide cracks.

Additional danger: Dry avalanches (see 1st map)
