

In some regions some fresh snow. Wet avalanches as the day progresses

Edition: 25.4.2018, 17:00 / Next update: 26.4.2018, 17:00

Wet avalanches as day progresses

Wet, region B

Level 2, moderate

Wet avalanches as day progresses

Outgoing longwave radiation during the night will be severely restricted. As the day progresses individual full-depth and wet avalanches are possible, including medium-sized ones. The avalanche prone locations are to be found in particular in east to south to west facing aspects below approximately 3000 m and on north facing slopes below approximately 2500 m. Backcountry tours and ascents to alpine cabins should be started early and concluded timely. Areas with glide cracks are to be avoided as far as possible.

Additional danger: Dry avalanches (see 1st map)
