

# In the early morning a widespread favourable avalanche situation will prevail. Wet avalanches during the day

Edition: 27.4.2018, 17:00 / Next update: 28.4.2018, 17:00

## Wet avalanches as day progresses

### Wet, region B

### Level 3, considerable

### Wet avalanches as day progresses

A clear night will be followed in the early morning by favourable conditions. As the day progresses as a consequence of warming during the day and solar radiation there will be an increase in the avalanche danger. Full-depth and wet avalanches are to be expected, including large ones in isolated cases. The avalanche prone locations are to be found in particular on north facing slopes below approximately 2400 m and on sunny slopes below approximately 3000 m. Backcountry tours and ascents to alpine cabins should be concluded timely.

### Additional danger: Dry avalanches (see 1st map)
