

In the south a critical avalanche situation will be encountered in some regions

Edition: 1.5.2018, 17:00 / Next update: 2.5.2018, 17:00

Avalanche danger

region A

Level 3, considerable

Fresh snow and snow drifts

Avalanche prone locations

Danger description

At elevated altitudes sometimes large snow drift accumulations have formed. The fresh snow and snow drift accumulations of the last few days are prone to triggering. Single persons can release avalanches. Individual natural avalanches are possible, especially along the border with Italy. Avalanches can reach dangerously large size. Backcountry touring calls for caution and restraint.
