

# In the south a critical avalanche situation will be encountered in some regions

Edition: 1.5.2018, 17:00 / Next update: 2.5.2018, 17:00

## Avalanche danger

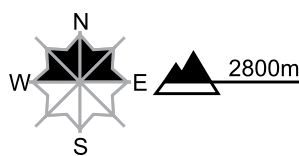

**region B** **Level 3, considerable**

### Snow drifts

#### Avalanche prone locations

#### Danger description

As a consequence of fresh snow and wind further snow drift accumulations will form. The fresh and older snow drift accumulations are prone to triggering. At elevated altitudes the likelihood of avalanches is greater. Single persons can release avalanches, including dangerously large ones. The current avalanche situation calls for experience in the assessment of avalanche danger and caution.

**Danger levels**

-  1 low
-  2 moderate
-  3 consider.
-  4 high
-  5 very high
