Avalanche danger

region D

Level 2, moderate

Snow drifts

Avalanche prone locations

Danger description

The snow drift accumulations of the last few days are in some cases prone to triggering. These are mostly small. They are to be evaluated with care and prudence in steep terrain. At elevated altitudes the likelihood of avalanches is greater. Apart from the danger of being buried, restraint should be exercised also in view of the danger of avalanches sweeping people along and giving rise to falls.

Wet avalanches

Northern flank of the Alps: On very steep sunny slopes moist snow slides and avalanches are possible as the day progresses.

Danger levels

1 low

2 moderate

3 consider.

4 high

5 very high
