

In the south a precarious avalanche situation will be encountered in some regions

Edition: 2.5.2018, 17:00 / Next update: 3.5.2018, 17:00

Avalanche danger

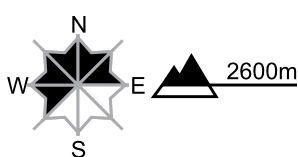

region A

Level 3, considerable

Fresh snow and snow drifts

Avalanche prone locations

Danger description

As a consequence of fresh snow and wind further snow drift accumulations will form, in particular on the Main Alpine Ridge from the Monte Rosa massif to the Simplon Pass. The fresh and older snow drift accumulations of the last few days are prone to triggering. Single persons can release avalanches, including dangerously large ones. Backcountry touring calls for caution and restraint.

Wet avalanches

As the snowfall level rises moist snow slides and avalanches are to be expected.
