

In Upper Valais a considerable avalanche danger will be encountered in some regions. Wet avalanches as the day progresses

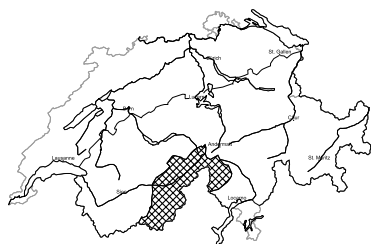

Edition: 4.5.2018, 17:00 / Next update: 5.5.2018, 17:00

Wet avalanches as day progresses

Wet, region A

Level 3, considerable

Wet avalanches as day progresses

The danger of full-depth and wet avalanches will increase during the day. In all aspects full-depth and wet avalanches are to be expected below approximately 3000 m. These can release the entire snowpack and reach large size in isolated cases. In particular on east, south and west facing slopes moist snow slides and avalanches are possible also in high Alpine regions.

Backcountry tours and ascents to alpine cabins should be started early and concluded timely.

Additional danger: Dry avalanches (see 1st map)
