

Moderate avalanche danger will prevail. Wind slabs represent the main danger

Edition: 13.4.2021, 17:00 / Next update: 14.4.2021, 17:00

Level 2, moderate

Wind slabs

Avalanche prone locations

Danger description

Fresh and somewhat older wind slabs are in some cases still prone to triggering. They are to be evaluated with care and prudence in steep terrain. In high Alpine regions the avalanche prone locations are more prevalent and the danger is slightly greater. Avalanches can reach medium size. Backcountry touring calls for careful route selection.

Wet avalanches as day progresses

As a consequence of solar radiation moist snow slides and avalanches are to be expected.
