

# Considerable avalanche danger will prevail. Fresh snow and wind slabs require caution

Edition: 14.11.2019, 17:00 / Next update: 15.11.2019, 17:00

## Level 3, considerable

### Wind slabs

#### Avalanche prone locations

#### Danger description

The fresh and older wind slabs represent the main danger. As a consequence of the sometimes storm force wind they will increase in size additionally during the night. Avalanches can be released easily and reach medium size. The wind slabs are to be avoided as far as possible. Backcountry touring calls for experience in the assessment of avalanche danger.
