

A favourable avalanche situation will prevail

Edition: 5.3.2021, 17:00 / Next update: 6.3.2021, 08:00

Level 1, low

No distinct avalanche problem

Individual avalanche prone locations for dry avalanches are to be found in particular in extremely steep terrain at elevated altitudes. This applies in particular in areas where the snow cover is rather shallow in little used backcountry terrain. Apart from the danger of being buried, restraint should be exercised as well in view of the danger of avalanches sweeping people along and giving rise to falls.
